

# Natural Heritage Systems -A Basic Example

This is an area of Manitoulin that is representative of much of the settlement patterns on the Island. We can see a small hamlet to the Northeast, some cultivated fields, and a mix of hardwood and coniferous forest. Activities in the area include seasonal residence, hunt camps, small scale commercial and residential uses, as well as agriculture.

In an area like this, where might we see Natural Heritage System Core Areas or Linkages?
